

Big impact on heating bills, small impact on the environment

The new CO₂ ECO Heating System from SANYO is the perfect alternative to boilers. Using heat pump technology with environmentally friendly CO₂ refrigerant, it's ideal for domestic hot water and central heating.

- Environmentally friendly alternative to traditional gas, oil and electric boilers
- Provides domestic hot water and also central heating - radiator or under floor
- Very energy efficient with COP's up to 3,75 means reduced fuel bills and carbon emissions
- Provides hot water at 65°C compared to 45-55°C for HFC heat pumps
- Maintains its performance even in temperatures as low as -25°C
- Easy to install and maintain - only requires connections to water and electricity
